PipelineRx Appoints Michael Myers to Board of Directors

Company's New Board Member Provides Healthcare, Technology, and Company Building Expertise

SAN FRANCISCO, Calif.—July 19, 2018-- PipelineRx, a leading medication management technology company focused on clinical telepharmacy, today announced the addition of Michael Myers to the board of directors. PipelineRx offers the only scalable technology platform to optimize pharmacy staff and workflow across care settings, and provides remote pharmacy services, clinical programs, and advanced medication management.

Mr. Myers brings his experience as an accomplished CEO and product manager across multiple healthcare companies. Previously, he led the effort to develop strategies for care model changes as the SVP and GM of Life Sciences at McKesson Provider Technologies, including personalized medicine, inpatient variability, predictive staffing, inpatient quality monitoring and throughput. He also led the turnaround of McKesson's Horizon Clinicals solution from number seven in the KLAS rankings in 1999 to number one in 2004.   Mr. Myers was formerly on the senior management teams at Access Health and CliniCom, leading operations for both companies through IPOs and eventual merger transactions. Mr. Myers formerly served as Chairman of the Board at iMDsoft Corporation, a global leader in clinical information systems.

"I am honored to serve on the board of directors for PipelineRx as the pharmacy profession is evolving to be a bigger part of the collaborative clinical care team. PipelineRx is helping disrupt the traditional medication management model, for the betterment of patient care," said Mr. Myers. "I look forward to working alongside other members of the board, and joining in their mission to optimize and transform pharmacy, while improving patient care and experience in the process."

"We look forward to the unique mix of leadership, deep technology skills, and company building experience Mike will bring instantly to PipelineRx," shared Brian Roberts, CEO of PipelineRx. "As we explore other clinical settings of pharmacy where efficiencies remain to be realized and as we follow the patient through discharge and into the home with access to expert pharmacy care, the collective experience of our management team and Michael's software skillset will help us to better serve our customers and ultimately patients along the care continuum."

About PipelineRx

PipelineRx is the leading independent pharmacy platform and services provider serving individual acute and specialty hospitals and integrated delivery networks. The Company's solutions enable hospitals and health systems to dramatically increase operating efficiencies while ensuring medication efficacy, increasing patient safety, and improving clinical outcomes. PipelineRx differentiates its unique services via its secure, cloud-based technology platform, PowerGridRx, and its optimized, distributed telepharmacist network. PipelineRx is privately held and headquartered in San Francisco, California.
